

EMPOWERING EQUAL ACCESS

At Hornetsecurity, we embrace this responsibility wholeheartedly. Accessibility is central to our development process, and we are committed to continuously optimizing usability for all users. Accessibility is not only a legal requirement in many countries but also a fundamental aspect of corporate social responsibility. Through our softwares and technologies we aim to enable equitable access for all individuals, regardless of disabilities or limitations.

KEY ACCESSIBILITY STANDARDS IN OUR

SECURITY AWARENESS SERVICE

1. PERCEIVABLE

We ensure that individuals with sensory impairments can access information, even if they cannot see images or hear audio. No one is excluded due to sensory limitations. To achieve this, we have implemented the following measures in our solutions:

- » Visual information is also described with text—we use both icons and text for clarity.
- » Existing e-trainings are continuously updated with subtitles to improve accessibility.
- » High-contrast design ensures text is easily readable against the background.
- » We use semantic HTML for headings, lists, and tables to improve screen reader compatibility.
- » Content can be scaled up to 200% without losing quality.
- » Our HTML code is screen reader-friendly, and we continuously refine it as needed.

2. OPERABLE

Our solutions are designed to ensure that individuals with motor impairments or those who don't use a mouse can easily navigate and interact with content. Intuitive operability ensures equal accessibility. Here's how we achieve this:

- » Our User Panel is fully operable without a mouse.
- » Users are given ample time to read and interact with content. Time limits for interactions are minimized and only implemented when necessary to enhance the user interface.
- » Flashing content is avoided, ensuring no element blinks more than three times per second.
- » Meaningful link text is provided to clearly describe the destination or action.

3. UNDERSTANDABLE

We ensure that individuals with cognitive impairments or limited technical knowledge can effectively use our solutions. Content is presented in a clear and intuitive way. Here's how we address this:

- » The user panel is tailored to meet the needs of all users and requires no special IT knowledge. The intuitive design naturally guides users in the right direction.
- » Consistent navigation is maintained across the entire User Panel.
- » Error messages are precise and provide helpful guidance.
- » No unexpected changes occur on the website without user interaction.
- » Forms are minimized to reduce complexity.
- » Tooltips are implemented where needed to provide additional guidance.

4. ROBUST

The digital landscape is constantly evolving, and so are our solutions. Our robust design ensures that content remains accessible in the long term, even as new technologies emerge. Key measures include:

- » Compatibility with all major browsers.
- » Adherence to the latest web standards.
- » Full support for mobile devices with responsive design principles.

OUR COMMITMENT TO ACCESSIBILITY

We understand the importance of social responsibility and strive for holistic accessibility in all our solutions. Our dedication to inclusive design ensures that everyone can benefit from our software—now and in the future.

We also understand that it is a continuous work that must always improve the experience for accessibility. We will therefore continue to identify areas of improvements on our solutions and deliver improvements through future updates.
